JAY PATEL

CLOUD ARCHITECT • SECURITY • AUTOMATION • DEV & OPERATIONS

Email: **pateljay0j@gmail.com** | Phone: **+91 9104974534** | GitHub: **github.com/jay240322** | Hashnode: **jaypatel2403.hashnode.dev** | Medium: **medium.com/@JayPatel_1**

PROFESSIONAL SUMMARY

Results-oriented Cloud Architect and DevSecOps Specialist with deep expertise in architecting highly available distributed cloud infrastructures, Kubernetes multi-cluster orchestration, zero-trust security postures, and automated CI/CD pipelines. Creator of **KubeSense** (AI-powered Kubernetes diagnostic and root-cause analysis platform leveraging Google Gemini LLM) and **DevSpace** (cloud-native developer environment workspace automation CLI). Passionate about infrastructure-as-code, reliability engineering, and delivering hardened cloud solutions.

CORE COMPETENCIES & TECHNICAL ARSENAL

Cloud & Infrastructure:	AWS (EKS, EC2, S3, IAM, VPC, CloudFront, Route53), GCP, Hybrid Cloud, Linux Systems
Containers & Orchestration:	Kubernetes (K8s), Docker, Helm, Kustomize, Microservices Architecture, Containerd
Security & DevSecOps:	Zero-Trust Architecture, RBAC, Vulnerability Scanning (Trivy), SAST/DAST, Secret Management, Hardening
Automation & CI/CD:	Terraform (IaC), GitHub Actions, GitLab CI/CD, GitOps (ArgoCD), Bash Automation, Ansible
Languages & Frameworks:	Go (Golang), Python, JavaScript / TypeScript, Node.js, Express, React, RESTful APIs
Observability & Tools:	Prometheus, Grafana, Cluster Logging, Gemini AI Diagnostics, Postman, Git, Linux Kernel

KEY ENGINEERING PROJECTS & WORKS

KubeSense — AI-Powered Kubernetes Troubleshooting Platform | *React, Node.js, Gemini LLM, K8s, PostgreSQL*

- Architected and engineered an intelligent Kubernetes troubleshooting platform that automates incident diagnostics and root-cause analysis using Google Gemini LLMs.
- Built full-stack microservices architecture with real-time pod telemetry, event inspection, and diagnostic recommendations through a modern responsive dashboard.
- Live Demo and interactive deployment walkthrough featured at **jaypatel.online/kubesense** with full open-source codebase on GitHub.

DevSpace — Cloud-Native Developer Workspace CLI & Platform | *Go (Golang), Docker, Kubernetes*

- Built a cross-platform CLI tool automating local-to-cloud development environments, instant container compilation, and Kubernetes namespace provisioning.
- Eliminates dev-prod parity issues and streamlines developer onboarding with single-command workspace bootstrap routines.

Zero-Trust Cloud Infrastructure & Security Automation | *Terraform, AWS, CI/CD, Trivy*

- Implemented reusable Terraform infrastructure modules deploying hardened VPCs, private EKS clusters, and least-privilege IAM roles.
- Integrated automated security gating into GitHub Actions pipelines, blocking high/critical vulnerabilities before production deployment.

TECHNICAL WRITING & ARTICLES (EXPLOIT NOTES)

- **Author of 40+ Technical Articles & Exploit Notes** on Hashnode (**jaypatel2403.hashnode.dev**) and Medium (**medium.com/@JayPatel_1**).
- Deep-dive writeups covering Kubernetes security incident response, cloud attack surface mitigation, automated threat modeling, and modern DevSecOps patterns.

- Active open-source maintainer sharing actionable architecture guides for cloud engineers and security practitioners.

EDUCATION & RECOGNITIONS

Bachelor of Technology in Computer Engineering / IT

- Specialized in Cloud Systems, Network Security, and Distributed Systems.
- Active contributor to Cloud-Native Computing Foundation (CNCF) ecosystems and developer communities.
